Portable Shade FOR HOGS

When hogs do not have access to natural shade from trees or brush, it is usually profitable to provide a shelter from the sun. A 12 x 12 foot shade will accommodate 10 to 12 hogs weighing 100 to 200 pounds. This light-weight shade on skids can be pulled from one lot to another. When moving the shade, a temporary stiffener should be placed between the skids to avoid pulling them together.

In areas subjected to heavy winds, the shade should be anchored or tied to posts or pipes driven into the ground. Extra precautions should also be taken to anchor the roof to prevent the wind from blowing the roofing sheets away.

CROSS SECTION

A large-scale working drawing may be obtained through your county agent or from the Extension agricultural Engineer at most State agricultural colleges. There is usually a small charge.

ORDER PLAN NO. 5870, PORTABLE SHADE
FOR HOGS

If the large-scale drawings are not available in your State, write to the U.S. Department of Agriculture, Agricultural Engineering Research Division, Plant Industry Station, Beltsville, Md. The U.S. Department of Agriculture does not distribute drawings, but will direct you to a State that does distribute them.

March 1960

NOTE: USE OF WATERPROOF GLUE IS RECOMMENDED.
